

LOCAL ADDITIONS THAT MAKE A DIFFERENCE TO YOUR SOIL

Jamaican gardeners are resourceful, and local materials can enrich your soil mix beautifully:

1. CRUSHED EGGSHELLS OR LIMESTONE

Add calcium, preventing leaf yellowing.

2. CHARCOAL BITS

Improve aeration and support beneficial microbes.

3. SEAWEED OR FISH EMULSION

Provide trace minerals and organic nitrogen.

4. BANANA PEEL COMPOST

Adds potassium for strong stems and leaves.

5. COCONUT HUSK FIBERS

Increase drainage and structure in containers.

These additions make your soil mix uniquely Jamaican—sustainable, affordable, and effective.
